Disconnect wire(s) from factory horn under hood or in grill. Check to see if wire(s) have:
1. Constant 12 volts
2. 12 volts only when horn button pressed
3. Constant ground
4. Ground only when horn button is depressed

Note this for proper connection of the direct drive compressor.

This diagram is for wiring a 6126 or 6127 horn with direct drive compressor (P/N DD1)

NOTE: If second wire in the harness at the factory horn (under hood) is a CONSTANT 12 volts you can connect PIN 85 to it or connect it to PIN 30.
